Technical data

Duropal Element XTreme Touch P2

HPL bonded board consisting of a particleboard type P2 conforming to EN 312, surfaced on both sides with Duropal XTreme Touch, an attractive supermatt surface material with an anti-fingerprint effect in combination with natural-looking stone or wood structure.

Applications

Properties

Anti-fingerprint

Food harmless

Particularly low emission

Certificates

¹⁾ Dirt, spots and similar surface defects 2) Fibres, hairs and scratches

Additional information

Product standard	in accordance with EN 13894-2
Areas of application	 Furniture production and interior design wherever high demands are made on quality and durability: For kitchen and interior design furniture, in shop fitting and partition wall construction, for interior fitting of banks, offices, schools, clinics, laboratories, retail buildings, in shipbuilding and motor vehicle construction.
Core material	 ClassicBoard P2 Urea resin-bonded particleboard, type P2 conforming to EN 312, suitable for non load-bearing purposes in dry areas

³⁾ No surface damage according to the standard, optical change of the surface (>10 N) possible

⁴⁾ Core material

October 2025

Technical data

Duropal Element XTreme Touch P2

Product safety	 This product follows the REACH regulation EC 1907/2006 an article. Following Article 7 it does not need to be registered. The surface is physiologically safe, and approved for direct contact with food acc. to Regulation (EU) No. 10/2011. We manufacture the panels without the use of organohalogens, heavy metals, preservatives, wood
	protectors or organic solvents.
Special	 The coarser the structure and the lighter the decor, the greater the scratch resistance. Due to a low orientation of the lacquered surface the field of application, the conditions of lighting and the decor may cause certain optical effects. This is a result of the production methods and does not constitute a quality defect. Depending on the decor and surface texture, slightly different surface visual impressions can result between cut panels viewed from different angles. This is a result of the production methods and does not constitute a quality defect. Especially for large applications, we recommend paying attention to the colour and texture uniformity of the boards and cut products used when further processing and installing and that the production direction is taken into account. To avoid any possible aesthetic and optical impairments, the orientation of the boards specified on the protection film of the product must strictly be followed, especially for large-surface applications. XTreme Rustic Wood / XTreme Volcano doesn't prevent scratches, but allows horizontal application! Classification HGP / HGS / HGF is achieved with the surface textures recommended for horizontal applications. Requirements of classification VGP / VGS / VGF are met by all surface textures. Please
	refer to our sales documentation, to check which textures are available for this product. • FSC certification or PEFC certification available on request.
Note	 FSC license code: FSC[®] C011773 PEFC license code: PEFC/04-32-0828
Colour and surface match	 Decor, structure and core board all influence the final appearance of the end product. Due to the product-specific differences in production technologies, even identical decor/structure/core board combinations can result in slight optical and tactile deviations across different product groups and formats. Such deviations do not constitute a defect. The choice of surface structure in particular has a significant influence on the visual impression, the tactile perception as well as the technical characteristics of the product. Thus, the overall impression of a decor can change almost completely depending on the surface structure. Furthermore, mechanical influences on the product surface can lead to a higher contrast optical perception with dark decors. To ensure that you always achieve the best results with our products and to clarify any deviations in advance, we will be happy to advise you individually.
