

Pfleiderer XTreme Products 2025–2028: smart products for all applications

Neumarkt, January 2025 - Particularly robust and easy to clean, easy to maintain and with an anti-fingerprint effect: With the XTreme product family, Pfleiderer offers wood-based materials with practical additional benefits for furniture and interior design. The user-friendly products are an essential part of the 2025–2028 collection. The family includes Duropal XTreme, Duropal XTreme plus, Duropal XTreme Touch and PrimeBoard XTreme.

In the new collection, these products are available from stock in a new and expanded range - in new trend decors and visually coordinated. "Oils, dirt, germs, acids, sharp objects or abrasion - many interior surfaces have to withstand heavy use. At the same time, our customers expect a high-quality visual appearance with a consistent decor. We have further developed our practical and elegant XTreme Products according to these standards," says Michael Schiebe, Sales Manager Retail and Contract Core West. "The exceptional surface quality meets the highest standards of hygiene, practicality, durability and user-friendliness."

Extended design scope and increased functionality

For Duropal XTreme, XTreme plus and PrimeBoard XTreme Matt P2, the 2025–2028 collection has been expanded to 24 decors. Duropal XTreme Touch has been added to the collection with ten decors in the stone texture Volcano and four decors in the wood texture Rustic Wood. Planners and users thus benefit from greater creative freedom for designs with a velvety-soft feel and matt, low-reflection surfaces. For lovers of high-gloss surfaces, seven additional decors for PrimeBoard XTreme High Gloss are available from stock.

The durability, impact resistance and outstanding anti-fingerprint effect of the XTreme products are further enhanced by the special scratch resistance of Duropal XTreme plus, which is suitable for heavy-duty horizontal contact surfaces such as tables and counters. The product

has now been further developed in terms of functionality. The surface of Duropal XTreme plus is now oleophobic: cooking oils can be easily removed with a dry microfibre cloth. A damp microfibre cloth is sufficient for soiling such as juice, vinegar, beet or fingerprints. For grease such as butter or coffee and tea stains, a grease-dissolving all-purpose cleaner is sufficient.

Whether in areas frequented by the public or in private homes, the hygienic properties of surfaces are becoming increasingly important. Duropal XTreme plus has a highly antibacterial surface and meets the high hygiene requirements in public and private areas. It reduces 99% of all germs within one day and lowers the risk of people becoming infected with pathogens via the surfaces.

Easy-care surfaces and seamless transitions

The easy-care supermatt surface material has a practical anti-fingerprint effect. "Duropal XTreme is also one of the few versions available that can be postformed. This also enables curved surfaces and seamless transitions," says Michael Schiebe. The Duropal SolidColor XTreme variant offers an unusually uniform appearance thanks to the complete colouring of the laminate. Surfaces in crystal white, anthracite gray or volcanic black can thus be created as if from a single piece without visible joints.

Attractive contrasts and durable material

The hot-coated PrimeBoard XTreme engineered wood panel is ideal for vertical applications, such as kitchens and furniture fronts. In addition to the wide variety of decors, a multi-layer lacquering technology ensures brilliance with optimum colour stability, good workability and high robustness. The matt and high-gloss versions allow stylish design combinations. The natural black MDF version is also very popular and is appreciated by users for its natural-looking, black through-dyed fibreboard. PrimeBoard XTreme is available in the format 2,800 x 2,100 mm. For heavy-duty horizontal surfaces in damp and wet areas, Duropal Compact XTreme plus impresses with its homogeneous black, grey or white through-dyed core. This high-quality and unique Compact sheet has a hard-wearing, electron beam-

hardened surface on both sides with high scratch resistance and anti-fingerprint effect as well as high moisture and impact resistance thanks to the Compact core. This product is also antibacterial as standard, with a germ reduction rate of 99% within one day.

About Pfleiderer

Pfleiderer is a leading manufacturer of high-quality engineered wood products, laminates and resin-based adhesives. The Business Unit Engineered Wood Products produces high-quality engineered wood and laminates that are used in the rapidly growing market for high-end kitchens and furniture as well as in structural timber construction in Western Europe. Pfleiderer is also a leading manufacturer of specialty and industrial resins through its Silekol business unit. These are used in Pfleiderer's own products as well as by customers in the panel production, packaging, construction and building materials industries. Pfleiderer, headquartered in Neumarkt in der Oberpfalz, employs around 2,200 people, mainly at five locations in Germany and one for adhesive systems in Poland. At Pfleiderer, sustainable work has been closely linked to the renewable material wood for over 125 years. The company places a particular focus on sustainable procurement and production, reducing carbon emissions and protecting the environment.
